Abstract

This MSc thesis is about utilizing artificial intelligence models in order to find specific knowledge. As part of this goal we will develop a complete web application, where users will be able to ask questions to artificial intelligence models, which will answer them based on a specific context. We will follow two different methodologies. For the first methodology we will create our own text generation AI model [1] which will be trained to understand specific knowledge. For the second methodology, we will use existing artificial intelligence models, trying to limit them so that they respond only to the specific knowledge context that we have chosen. In the end we will be able to come to conclusions about the usefulness of these methodologies.

Περίληψη

Η παρούσα μεταπτυχιακή εργασία ασχολείται με την αξιοποίηση μοντέλων τεχνητής νοημοσύνης για την υποβοήθηση ανεύρεσης συγκεκριμένης γνώσης. Στα πλαίσια αυτού του στόχου θα αναπτύξουμε μια πλήρη διαδικτυακή εφαρμογή, στην οποία οι χρήστες θα μπορούν να κάνουν ερωτήσεις σε μοντέλα τεχνητής νοημοσύνης, τα οποία θα τους απαντάνε με βάση συγκεκριμένο πλαίσιο. Θα ακολουθήσουμε δύο διαφορετικές μεθοδολογίες. Για την πρώτη μεθοδολογία θα δημιουργήσουμε ένα δικό μας μοντέλο τεχνητής νοημοσύνης παραγωγής κειμένου [1] το οποίο θα εκπαιδευτεί για να κατανοεί συγκεκριμένη γνώση. Για την δεύτερη μεθοδολογία θα χρησιμοποιήσουμε υπάρχοντα μοντέλα τεχνητής νοημοσύνης προσπαθώντας να τα περιορίσουμε ώστε να απαντάνε μόνο στο συγκεκριμένο πλαίσιο γνώσης που έχουμε επιλέξει. Στο τέλος θα μπορέσουμε να καταλήξουμε σε συμπεράσματα. Στο τέλος θα μπορέσουμε να καταλήξουμε σε συμπεράσματα για την χρησιμότητα αυτών των μεθοδολογιών.

1. Introduction

In our era, the knowledge we have acquired is bigger than ever. The number of books, notes, web pages and other forms of content keeps increasing year by year. It is impossible for any human being, to be able to read and process all this available knowledge. Fortunately, technology has been greatly improved and is being used daily for tasks involving knowledge search and analysis. While traditional tools like search engines made it easier for us to find existing knowledge, in the past years we have observed the increasing development of tools using artificial intelligence. We will study the usage of text generation machine learning models in specific knowledge search and analysis assistance. We will use two different methodologies for these tasks and we will develop a full web application with which users will be able to ask questions

In chapter 2 we will describe and analyze the fundamental theoretical concepts needed for better understanding of this thesis. We will also describe the various technologies and their advantage, which we will use for our application development and deployment.

In chapter 3 we will dive in the details of the two methodologies that we will use. We will compare them and we will describe their advantages and disadvantages.

In chapter 4 we will describe the architecture and the implementation of our application. We will show the components which construct our application, the tasks each component can perform and how they are connected together.

In chapter 5 we will show the design and execution results of our deployed application. We will investigate the various ways in which our application can be used by the users in order to find specific knowledge based on raw data like documents or web pages.

In chapter 6 we will write our conclusions we reached. We will describe the problems and limitations we faced. Finally, we will specify future improvements that can be made as well as future goals about scaling and expand the core idea.

2. Theory and Literature Review

In this report, we will explore the various factors that influence *fluid dynamics* in glaciers and how they contribute to the formation and behaviour of these natural structures.

In this report, we will explore the various factors that influence *fluid dynamics* in glaciers and how they contribute to the formation and behaviour of these natural structures.

3. Specific Knowledge Assistance Approaches

4. System Architecture

5. Usage and Execution of the Application

6. Conclusions and Future Work
